

RED CLIX

RX35 - METRIC PRECISION THREAD | METRISCHES ISO FEINGEWINDE DIN 13-2

This special combination of RX35 parts have been designed for the professional coffee expert in a competition situation. Both the axle and the grind grade dial have been equipped with an ultra fine precision thread. The main difference is the expanded click range for the same particle size range and the same brewing methodology. The click steps with the RX35 Combo are much finer, but at the same time, the click mechanism itself is as solid and stable as the standard version.

For example: if you currently use the grinder with 28 clicks for your brewing style, with the RX35 Combo you now need 56 clicks. If you go up or down by 5 clicks with the standard version, with the RX35 Combo you now need 10 clicks. The RX35 Combo actually gives you an additional step between two standard clicks. This might be helpful if you want to optimize extraction time for a particular lightly roasted specialty coffee espresso shot.

Target Particle Resolution (typical): 15 Micron per click

Horizontal Shift of targeted Particle Size
(Normal Distribution Target Maximum)

Vertical Burr Pitch per Click (typical): 29 Micron

Narrow Blade Gap per Click (typical): 6 Micron

IMPORTANT

ONLY USE THE SPECIAL RED COLORED GRIND GRADE DIAL WITH THIS SPECIAL RX35 AXLE. THE EXTRA FINE PRECISION THREAD ON BOTH AXLE AND DIAL ARE VERY DELICATE AND WILL GET DAMAGED IF USED WITH ANY OTHER PARTS. PLEASE MAKE SURE YOU DO NOT MIX ANY RED CLIX PART WITH STANDARD PARTS. OTHERWISE THE RX35 PARTS WILL GET DAMAGED AND CAN NOT BE USED ANY MORE!
